

How to run application?

Open the project file in the editor / open the path terminal of the project

Ensure you are in correct path **CODE_Hayanan**

Install Dependencies:

npm install

Run the Development Server:

npm run dev

By default, Vite's development server runs on port 5173. Open your browser and navigate to **http://localhost:5173** to see your React app running.

I use chart.js to visualize the task priority level so if you don't have the library you need to install using

npm install chart.js
